**Figure S1.** Community of insects visiting apple flowers in each of the 26 cider orchards studied in Asturias (NW Spain), pooling data from 2015 and 2016. Honeybees comprised over 50% of total abundance in 21 of the 26 orchards. Numbers at the top of the columns are visitation rates (number of insect visits/100 flowers/5 min). Orchards 19 and 24 had honeybee colonies and orchard 23, commercial colonies of *Bombus terrestris*.
